

Prasham Desai

Game Developer | Unreal Engine | Gameplay Programming

Ahmedabad, India 📞 +91-9726733369 ✉ prashamdesai@gmail.com 🔗 LinkedIn 🐙 GitHub

SUMMARY

Game Developer with professional experience building and deploying mobile games across Android and iOS using Unity and C#. Currently focused on Unreal Engine 5 through independent development, building gameplay systems, vehicle mechanics, AI, UMG interfaces, animation systems, input handling, and interactive environments using Blueprints. Strong foundation in gameplay programming, multiplayer networking, performance optimization, and scalable game architecture, with hands-on experience independently learning and applying Unreal Engine systems.

TECHNICAL SKILLS

Unreal Engine: Unreal Engine 5.6, Blueprint Visual Scripting, UMG, Enhanced Input, Blueprint Interfaces, Animation Blueprints, Behavior Trees, Blackboards, NavMesh, Chaos Vehicles, Paper2D

Gameplay Systems: Character Movement, Vehicle Systems, AI & Navigation, Combat Systems, Interaction Systems, UI/UX, Camera Systems, Level Design, Game State Management

Unity & Game Development: Unity 2D/3D, C#, Gameplay Systems, Multiplayer Networking, Unity DOTS, Performance Optimization, Mobile Deployment, Firebase, Photon

Networking & Backend: Photon Multiplayer, Firebase, REST API Integration, MERN Stack

Deployment & Tools: Android, iOS, Google Play Store, Xcode, Git, GitHub, GitLab, Visual Studio, VS Code

WORK EXPERIENCE

IndiaNIC Infotech LTD.

Unity 3D Programmer

May 2025 – April 2026

Ahmedabad, India

- Developed and deployed multiple production mobile games across Android and iOS using Unity and C#, contributing across gameplay, online systems, UI/UX, optimization, monetization, and release pipelines.
- Engineered end-to-end online multiplayer systems spanning matchmaking, room creation and lifecycle management, player sessions, friends, leaderboards, and real-time gameplay synchronization using Photon and backend services.
- Implemented client-backend communication and persistent online features using Firebase, supporting player data, analytics, cloud-backed systems, and game-service integrations.
- Designed multiplayer gameplay flows covering player connection states, joining/leaving rooms, matchmaking transitions, synchronized game state, and session handling across online matches.
- Optimized large-scale gameplay scenarios using Unity DOTS while improving UI/UX and maintaining responsive performance across mobile devices.

SELECTED UNREAL ENGINE PROJECTS

Jetpack Journey | UE 5.6, Blueprints, Chaos Vehicles, Enhanced Input

- Built a 3D platformer with ground movement, fuel-based jetpack traversal, dynamic platforms, pressure-plate interactions, and level progression.
- Built and integrated a 4-wheel AWD automatic vehicle from scratch using Chaos Vehicles, configuring drivetrain, suspension, torque, braking, steering, and vehicle physics.
- Implemented seamless on-foot/vehicle transitions using possession switching, input mapping contexts, Blueprint Interfaces, camera blending, skeletal vehicle animation, and custom physics assets.

ShooterGameUI | UE 5.6, UMG, Blueprints, Enhanced Input

- Built a production-style main menu and settings system with reusable UMG widgets, animated transitions, hover/click feedback, audio interaction, and touch support.
- Implemented runtime graphics presets, gamma and difficulty controls, Blueprint Interface communication, and a 3D sci-fi environment with Lumen lighting and character animation.

Red Hood | UE 5.6, Blueprints, Paper2D, AI

- Developed a 2D action platformer using Paper2D with modular dungeon layouts, flipbook animation, combat, health, pickups, and interactive level elements.
- Implemented enemy AI using AI Controllers, Behavior Trees, Blackboards, NavMesh pathfinding, and patrol, chase, and attack states.

EDUCATION

LJ Institute of Engineering and Technology

Bachelor of Engineering – Computer Science

Ahmedabad

November 2022 – August 2026
